

# DAY OLD BROILER AND PULLET CHICKS

## Ordering Procedures from Clients

Please follow the following easy and friendly steps to purchase the best chicks in Zambia:

1. Place your physical order for day-old broiler and layer chicks by contacting our friendly Sales Team and / or Tele-Salesperson (contact details attached);
2. The sales team will confirm the price / s of day-old-chicks when assisting booking your order and explain the payment procedures as well as the dates when you will receive the day-old-chicks;

### Customers must take note of the following important information:

- For any day-old boiler and / or pullet chick to hatch, the hatching process takes 21 days for a chick to see the first light and due to this reason, we urge our clients to order any day-old chicks at least 26 days before the actual placement. The 26 day-timeframe will assist our hatchery to classify the eggs for the hatching procedures and it will assist our clients to receive their day-old chicks in time and therefore to assist us in giving you the best possible service as committed by our Company and to meet our customers expectation to the best of our ability;
- Any orders placed with a shorter period than the 26-day timeframe, will only be executed if any day-old chicks is available. Clients ordering in the 26-day timeframe, will be “serviced” first and if any chicks are available, will be executed to the late comers. This procedure will assist our farmers to get organize and to prepare well in time for their physical placement and therefore for the day-old chicks to get the best possible start.

### What additional services do we give to our clients?

1. When purchasing our day-old broilers, two types of vaccines are administrated on the chicks before any broiler day-old chick are dispatched from the hatchery on the specific hatching day. The two vaccines administrated are for the following: New Castle Disease and secondly for Infectious Brongitis. These two vaccines are already calculated in the day-old-broiler price.
2. When purchasing our day-old layer chicks, four types of vaccines are administrated on the chicks before any layer day-old chick are dispatched from the hatchery on the specific hatching day. The four vaccines administrated are the following: New Castle Disease, Infectious Brongitis, Gumboro Disease and Marek Disease. These four vaccines are already calculated in the day-old-layer price.

# MEGA
